IGF-1 LR3 - Product & Packaging Information

Catalog information for the presentations listed below. Labeled amounts, form and packaging; not a Safety Data Sheet, chemical-identity certificate or batch test report.

1. Available presentations

IGF-1 LR3 1mg
Amount per vial: 1 mg
Form: Lyophilized powder
Packaging: 1 × 3 mL vial, boxed
Product ID: 1052

2. Reading the product information

Labeled amount and container size
The labeled amount describes the named product content. For powders, vial capacity is the container volume, not an added liquid volume or an instruction to add that volume. A labeled amount is not a statement of total dry fill mass or complete formulation.

Batch-specific testing
Open the product page linked below and select its COA tab. Match the lot on your container to the corresponding report. Test methods, results and dates belong to that lot-specific record; they are not repeated in this general product sheet.

3. Use and document scope

Research use
For laboratory research only. Not for human or animal use.

Handling and storage
Follow the applicable product label, issued safety documentation and laboratory procedure. Contact support@purelabpeptides.com when material-specific instructions are missing or conflict. This sheet does not set a storage temperature, shelf life, preparation method or transport classification.

Revision and coverage
Prepared 5 October 2026. Applies only to the named catalog presentations. Recheck this sheet when the labeled amount, formulation or packaging changes. Changes to batch reports are managed separately through the product COA records.
